

## **Mixing Instructions for GSR Calcium**

Minimum Rate of 10 Gallons of Clean Water Per Acre.

### **Mixing Directions:**

Mix with clean water only. Foreign substances may cause failure. Ensure compatibility is established before adding any other substances to the Genesis product. Please note the GSR product does not tank mix with carbon products such as fulvic acid or humates.

When mixing, fill tank 3/4 full. Mix Genesis in a 5-gallon bucket of warm water and then add to the tank. Ensure that the suspension is agitated or recirculated in the tank until it is applied.

GSR is an "All-natural Blend" of ingredients, but please take normal precautions.

- Do not ingest.
- Wear appropriate eye and mouth protection.
- Keep out of reach of children.
- Keep in a cool, dry place.
- In case of oral or eye contact, rinse and flush with clean water. If irritation persists, contact a physician.
